What Price Vaccinations? by Simone Delarue, translated from French, published by Happiness Press, Magalia, CA, 1992.

What Your Doctor May NOT Tell You About Children's Vaccinations by Dr. Stephanie Cave, Warner Books, N.Y. 2001

A BBC documentary reported that women in the Philippines and Mexico had been given **tetanus** vaccine laced with HCG, an **experimental pregnancy vaccine** known to cause miscarriage.

Autism Treatments at: www.generationrescue.org/
Vaccine Ingredients at: www.vaclib.org/toc.htm#ingredients

If you decide to vaccinate your child:

Before vaccination:

- 1) **Pray** about waiting until they're 2 years old (& can talk) before injecting chemicals into them. *Find a sympathetic doctor.*
- 2) **Call** 1-800-909-SHOT and order a report of dangerous vaccine lots still in use. Research at: www.909shot.com
- 3) **Call** your doctor ahead of time and ask for NO live vaccines or ones containing even trace amounts of **thimerosal** (mercury). Ask that 1 vaccine to be given at a time at 6 month intervals & ask for a **lot number** (*the doctor is required by law to provide*).
- 4) **Fortify** the child with vitamins, especially lots of vitamin C, for several days prior to the shot. *Be sure the child is not sick or stressed, if they are, postpone vaccinations!*
- 5) **Do not** feed your child sugar or sugary drinks before a shot. (*They suppress the immune system for 6 hours.*)
- 6) **Have** the doctor give your child a **complete** (signed & dated) well-child physical before the shot.
- 7) **Do not be intimidated** by someone's credentials. Trust your maternal instincts & don't flinch at **threats**. Stay calm.

After vaccination:

- 1) **If** the child has a negative reaction to the shot, do **not** have any more shots in that series. **Reactions are WARNINGS!**
- 2) **Pray**. Have the child's father or elders of your church lay hands on the child and anoint him (or her) with oil in the Name of Jesus and ask for a **total** healing. (*James 5:14-15*)
- 3) **Call** your doctor and report the reaction, and respectfully **insist** that he or she **record** the reaction in your child's permanent record, **according to current LAW**.
- 4) **Call** the NVIC (National Vaccine Information Center) at 1-703-938-DPT3 or 1-800-909-SHOT & get a medical form to report the adverse reaction-- (*for the benefit of other babies & children*).
If there is no reaction after 3 months, be thankful!

If you decide not to vaccinate your child:

(P.S. Why would vaccinated people mind--aren't they protected?)

There are 2 legal ways to refuse vaccinations in Tennessee:

- 1) **MEDICAL EXEMPTION** (*lotsa luck!*)
- 2) **RELIGIOUS EXEMPTION**
(www.gval.com/exempt.htm is very helpful)
Submit this statement & be prepared to defend it in court, if necessary:
(Your child's name) will not and shall not be immunized due to family religious tennets and practice in accordance with Tennessee Code Annotated (TCA) 49-6-5001(b)(2)

(Parent's signature & date)

& print out: <http://www.vaclib.org/legal/refuselt.htm>

Vaccine Info:

10 Lesser known facts:

1) **Dissatisfied Parents Together** (703) 938-0342, lobbied to pass the National Childhood Vaccine Injury Act of 1986 to compensate parents for vaccine injuries (*34,000 reported between '91-'94*) and deaths (*700 reported between '91-'94*) By 1999, more than **1 billion dollars** had been paid, which is why vaccines now cost so much--they are taxed to pay for vaccine injuries.

2) Polio vaccine is grown on African green monkey kidneys. MMR vaccines are grown on chicken embryos and in a human diploid cell obtained from an **aborted fetus** (*as are the new flu shots*). The DPT & Heptatitis vaccines contain **formaldehyde & aluminum**.

3) "The common effects of the pertussis (DPT) vaccine are fever, coughing, a minor state of shock & local cutaneous reactions. The rarer effects are manifested in convulsions & permanent cerebral damage causing **mental retardation...**" (1979 Swiss Medical Journal '*Medicine et Hygiene*')

4) Class action lawsuits abound worldwide with thousands of parents asserting that their child's autism began immediately after immunization. In the U.S., you cannot sue a manufacturer anymore.

5) The manufacturer's warning on oral polio vaccine (OPV) states that doctors should warn parents to thoroughly wash hands after changing diapers. The **polio virus** remains **active** in the child's stool for up to 3 month's. Adults **have** contracted polio this way.

6) "Reports already published, in addition to our own observations, indicate that **vaccination** sometimes **leads to leukemia...**" (Julian Aleksandrowicz, Boguslaw Halikowski Medical Academy, Krakow, Poland, *Lancet*, May 6, 1967).

7) **S.I.D.S.** researcher Dr. Viera Scheibnerova stated that "**vaccination** is the single most prevalent & most preventable CAUSE of infant deaths." (May 27-29, 1991, in his lecture entitled "Association between Non-specific Stress Syndrome, DPT Injections & **Cot Death**" 2nd Immunization Conference, Camberra, Australia.

8) England passed a compulsory vaccination law in **1853**. Up until then, the highest death rate in 1 year from **smallpox** was 2,000. Fifteen years later, the death rate had jumped to 23,000 a year. Smallpox was wiped out when hygiene was improved & vaccinations were **refused**. (Information from The Poisoned Needle by Eleanor McBean, Mokelumna Hill, CA., Health Research 1974, p.12.

9) Sen. Ted Kennedy has introduced legislation that would set up a **nationwide vaccine registry** that could track parents who **resist** vaccinations. Non-compliance could affect availability of insurance, education, travel, hospitalization and some employment in the U.S.

10) Since colleges have mandated MMR shots, there has been an outbreak of '**College Meningitis**'- note that brain inflammation is a rare side-effect of the **mumps** vaccine, if live cultures are used.

Infectious Disease	Vaccination due date	Symptoms of the Disease/ Duration/Recovery Rate	When antibiotics don't work:	Reported Reactions to the Vaccine	How the Vaccine is Made Main Ingredients	Effectiveness of Vaccine
Diphtheria	2, 4, 6 months 18-24 months 4-6 years every 10 years	sore throat, fever, swelling of lymph nodes, white patches on tonsils, swelling in throat blocks breathing, 90% recover	If penicillin or erythromycin can't be had, fresh raw garlic, sage, cayenne & thyme are antibiotics	fever, shock, seizures such as twitching, jerking, eyes rolling, empty staring, joint pain, paralysis. encephalopathy	diphtheria bacteria detoxified with formaldehyde , thimerosal (<i>a mercury derivative</i>), glycine, sodium phosphate & aluminum .	1969 outbreak in Chicago - 33% of the FATAL cases had been fully vaccinated
Pertussis (Whooping Cough or 100-day Cough)	2, 4, 6 months 18-24 months 4-6 years every 10 years	dry cough, slight fever about 10th day, loss of appetite, spells of coughing, 4th week gasping for air (<i>danger stage</i>), 3 months for full recovery	Try chicken soup with cayenne pepper, fresh citrus w/inner white peel (<i>bioflavonoids</i>), onion soup, honey & lemon.	screams, high fever (105+), convulsions, shock, paleness, staring, head bobbing, brain damage, S.I.D.S. (death), Diabetes Type I, Autism	whole B pertussis bacteria grown, harvested, inactivated with heat and added to potassium phosphate, salt, thimerosal (<i>mercury</i>) & aluminum .	1986-Kansas, 1300 cases- 90% had been fully vaccinated 1991-MD epidemic- all cases were vaccinated
Tetanus (Lockjaw)	2, 4, 6 months 18-24 months 4-6 years every 10 years	bacteria enters through cut, causes first a headache, then tight muscles, jaw spasms, convulsions, head drawn back, rigid limbs, inability to open jaw, exhaustion. 60% recover	Oxygen kills tetanus bacteria. Apply peroxide (H ₂ O ₂) or chewed-up plantain leaves. Give drops of lobelia tincture or essential oils orally.	fever, shock, seizures such as twitching, jerking, stiffness, eyes rolling, empty staring, sleepiness, joint pain, diarrhea, appetite loss, infantile spasms, inner ear nerve damage	diphtheria bacteria detoxified with formaldehyde and diluted with sodium phosphate, glycine, thimerosal (<i>mercury derivative</i>) & aluminum . (<i>Alzheimer's is linked to aluminum</i>)	WWII-12 cases of tetanus reported, 4 of them (<i>33%</i>) had been fully vaccinated
Measles	15 months 6 yrs., 10 yrs., 14 yrs., 18 yrs.	cough, fever, runny nose, (medicine won't help), white dots in mouth, then rash, ears 1st, spreads 3 days, lasts 1 wk.	Sip freshly squeezed parsley/carrot/apple juice, Use vinegar or oatmeal in bath, dust w/cornstarch.	mental retardation, Diabetes Type I, meningitis, seizures, paralysis, M.S., Autism, Crohn's Disease, epilepsy	live measles virus grown in cell culture of chicken embryo (<i>MMR vaccine is not recommended for those with allergies to eggs</i>)	1995-more than 56% of U.S. cases had been fully vaccinated
Mumps	15 months 6 yrs., 10 yrs., 14 yrs., 18 yrs.	painful swelling along jaw line ("chipmunk look"), fever, headache, lasts 10 days	Drink lots of water, drink elderberry (or other berry) juices & orange veggies	rashes, itching, bruises, febrile (<i>fever</i>) seizures, nerve deafness, encephalopathy, meningitis	weakened live strain of mumps virus grown in chicken embryo Some MMR shots contain MSG	Before vaccines, nearly every child got mumps. No records were kept.
Rubella (German or 3-Day Measles)	15 months 6 yrs., 10 yrs., 14 yrs., 18 yrs.	runny nose, sore throat, slight fever, pink raised spots on face, trunk, limb, lasts 3 days	Bed rest, fluids, pat wet oatmeal or baking soda on spots to relieve itch.	weakness, numbness, facial paralysis, Diabetes Type I, Arthritis, Chronic Fatigue Syn.	live rubella virus grown in an aborted human fetal tissue + neomycin, sorbitol, gelatin	Casper, WY, 73% of reported cases had been fully vaccinated
Polio (Sabin-OPV <i>live virus taken orally</i>) (Salk-IPV <i>dead virus</i>)	0-6 months 4-6 months 2 months 4 months	Fever, headache, sore throat, vomiting, drowsiness, headache, stiffness in the neck, back & legs sometimes resulting in paralysis. The virus lives in the mucous linings of the nose/throat.	<i>A severe calcium/magnesium deficiency precedes polio.</i> Try deep muscle therapy (<i>massaging the muscles from 4 different angles</i>) to stimulate blood flow.	Polio. Live poliovirus stays in the gastrointestinal tract and can be shed for 6 to 8 weeks in body wastes, also is linked to Guillain-Barre Syndrome, CFS. (<i>Vaccine-induced polio is often called "aseptic meningitis."</i>)	OPV -grown in African green monkey kidney cell cultures, w/salt, antibiotics, calf serum then streptomycin & neomycin IPV -inactivated, also grown in monkey kidney, formaldehyde , phenoxyethanol & polymyxin	1980-89 3 out of 5 polio victims had been fully vaccinated Contaminated OPV strains linked to brain cancer 1955-97 www.sv40cancer.com
Hib (Hemophilus Influenzae or Meningitis)	2 months 4 months 6 months after 15 months	fever, vomiting, lethargy, headaches, stiff neck, bulging fontanel (<i>spaces between bones of infant's skull</i>)	Hib is rare, usually affecting babies. Give baby fresh raw garlic & onion juice with dropper.	Seizures, renal failure, rash, fever, pain, diarrhea, vomiting, upper respiratory infection...	formaldehyde, aluminum, ammonium sulfates... (<i>Most all adult flu shots contain mercury & aluminum.</i>)	55% U.S. cases in 1995 had been vaccinated once, 24% were fully HiB vaccinated
Hepatitis B (<i>transmitted in blood or sex, very rare in children</i>)	birth 1 month 6 months	nausea, vomiting, fatigue, rash, arthritis, headache, jaundice, dark urine, taste or smell changes	Cleanse the liver with dried milk thistle leaf or wormwood tea, then give raw garlic (<i>antibiotic</i>).	bowel obstruction, fever, shock, Guillain-Barre Syndrome, MS arthritis, cramps, S.I.D.S. death: http://iansvoice.org/	baker's yeast, formaldehyde , blood of Hep B infected donors, aluminum hydroxide & thimerosal (<i>a mercury derivative</i>)	1998 -France banned Hepatitis-B vaccine use in schools (<i>citing links to Multiple Sclerosis</i>)
